

The Central Utah Water Conservancy District (District) is seeking civil engineering, construction management, and geographical information system (GIS) students for internship positions at its Orem office. The District manages and maintains billions of dollars of water related infrastructure including dams, tunnels, pipelines, structures, water treatment plants, and hydroelectric facilities which are used to deliver both treated and raw water.

**Internship positions are available for both the asset management and engineering groups, with staffing assignments being made by the selection committee.** Internships

involve a variety of tasks and vary depending on assignment: collecting information (e.g., location, attributes, and media) for District infrastructure; job shadowing field operators in order to write technical operation and maintenance documents; reviewing record drawings and construction materials in order to gather information necessary to facilitate cost estimating; working with a GIS analyst to improve geographic accuracy on District assets; populating asset and cost databases; assisting with project plan reviews; financial tracking of contracts and project expenditures; project inspections; project documentation; and other duties as assigned. Interested students should fill out an online application at

[www.cuwcd.com/jobs.html](http://www.cuwcd.com/jobs.html) by November 16th, 2018. The District is looking for applicants who can start by January 7<sup>th</sup>, 2019 and work 15-20 hours per week during the winter/spring semester. The District intends to extend the positions into the summer with the expectation that the hires would work 40 hours per week. The starting pay range varies from \$13-\$15 per hour (based on qualifications and past work experience). Questions should be directed to Blake Buehler at [blake@cuwcd.com](mailto:blake@cuwcd.com).
