

CENTRAL UTAH WATER CONSERVANCY DISTRICT

The Central Utah Water Conservancy District (District) is seeking civil engineering, construction management, and geographical information system (GIS) students for internship positions at its Orem office. The District manages and maintains billions of dollars of water related infrastructure including dams, tunnels, pipelines, structures, water treatment plants, and hydroelectric facilities which are used to deliver both primary and secondary water. These internships involve collecting information (ex. location, attributes, and media) for District infrastructure, as well as job shadowing field operators in order to write technical operation and maintenance documents. Additional responsibilities include reviewing record drawings and construction materials in order to gather information necessary to facilitate cost estimating, working with a GIS analyst to improve geographic accuracy on District assets, and populating asset and cost databases. Interested students should fill out an online application at www.cuwcd.com/jobs.html by February 16th, 2018. The District is looking for applicants who can start immediately and are able to work 10-20 hours per week for the remainder of the semester. The District intends to extend the positions into the summer with the expectation that the hires would work 40 hours per week. The pay range varies from \$13-\$15 per hour (based on qualifications and past work experience).
